

Heats the water for large pool area

A field of 40 solar collectors provides Stödehuset outside of Sundsvall with heat and electricity. The installation heats the water for both the indoor and outdoor pools. The purchaser is the district energy company Sundsvall Energy, and the installation replaces a large part of the facility's oil consumption.

By using solar energy, Stödebadet hopes to offer warmer pools and expanded business hours. The customer received solar power subsidies for the installation.

INSTALLATION FACTS

Location: Sundsvall, Sweden
Number of solar collectors: 40
Size of installation: 400m²
Mounting: Ground installation

Electricity production: 40 kWp
Heat production: 360 kWp
Installation date: May 2012
