

Hot water for the hotel's pools

In Marbella, on the Spanish Costa del Sol, solar collectors from Absolicon provide heat for the hotel's hot water. The purchaser is Centro Forestal Sueco (CFS), a hotel which also operates a health and fitness club in conjunction with the Swedish Back Institute. A system with 12 solar collectors generates hot water

for pools that are used for rehabilitation. Warm water temperatures are important for rehab patients, and the pool maintains a constant temperature of 30 degrees Celsius. The 120m² installation is located in the hotel area and replaces part of the hotel's original oil consumption.

INSTALLATION FACTS

Location: Marbella, Spain
Number of solar collectors: 12
Size of installation: 120m²
Mounting: Above water cistern

Heat production: 60 kWp
Installation date: 2009
